

TANU CHANDRAVANSI

(+91) 9111829838 | tanuchandravanshi9@gmail.com | [LinkedIn](#) | [GitHub](#)

Education

M.Tech – Integrated MTech In AI | Vellore Institute of Technology | CGPA – **8.95** / 10 **Aug 2022 - May 2027**

Experience

Infosys Springboard Intern

Sep 2025 - Nov 2025 | [\(Link\)](#)

- Built real-time visual inspection pipeline reducing manual inspection time by 40%, deployed EfficientNet-B4 with GPU-optimized inference (2X speed improvement).
- Designed and optimized an end-to-end computer vision pipeline including image alignment, ROI extraction, defect masking, and automated reporting for industrial inspection workflows.
- Performed data preprocessing, augmentation, transfer learning, and evaluation using precision, recall, and confusion matrix analysis.

Social Summer of Code (SSOC'25) — Contributor

Jun 2025 – Aug 2025 | [Link](#)

- Top 10 Rank in SSOC (Summer School of Code) among thousands of participants.
- Contributed to open-source projects including PYQFort, WebDevIn100_Days, and SortVision, focusing on full-stack development and algorithm visualization.
- Collaborated in distributed teams, reviewed pull requests, and contributed to feature discussions in open-source workflows.

Technical Skills

Languages: Python (Primary), C++, Java

Backend & APIs: FastAPI, REST APIs

Machine Learning: TensorFlow, PyTorch, Computer Vision

Databases: SQL, MySQL, CyborgDB

Tools & Systems: Git, GitHub, Linux (basic), Jupyter Notebook

Projects

SecureMind AI -Encrypted Real-Time Fraud Detection | Python, ML, CyborgDB

[GitHub](#)

- Built a real-time fraud detection system processing high-volume transactional data using encrypted vector search, achieving 99.95% detection accuracy and 21ms latency. [Live Dashboard](#)
- Engineered feature extraction pipeline and implemented Isolation Forest (scikit-learn) with hyperparameter tuning for anomaly detection.
- Compared Isolation Forest with XGBoost and Random Forest, selecting the final model based on ROC-AUC and latency trade-offs.
- Built monitoring interface for anomaly visualization and fraud risk tracking to support decision-making workflows.

RAG-Based Test Case Generator | Python, FastAPI, Streamlit, Selenium, Transformers, ChromaDB

- Built a RAG-based QA system (MiniLM + ChromaDB) to generate 100+ structured test cases from project documentation.
- Developed a FastAPI-based REST microservice pipeline integrating a local LLM (Flan-T5) for structured test case generation.
- Automated Selenium script generation with AI-assisted HTML selector validation for reliable end-to-end web testing.

Certificates / Achievements

- Semi-finalist of HACKRX 4.0 Organised by BAJA FINSERV [Link](#)
- Google Cloud Generative AI Virtual Internship – SmartBridge (2025–26) [Link](#)
- GeeksforGeeks **Institute Rank: 3213** [Verify](#)
- Solved 300+ DSA problems across LeetCode and GeeksforGeeks.
- HackerRank 5★ in Python [Link](#)
